

Salesforce: now secured on mobile

Go ahead, give them mobile access.
With Salesforce Secured, you know
your contacts and data are safe.

The Salesforce Secured application is the only way to access native Salesforce features with leading security. It's the same Salesforce experience your representatives love, with a robust IT architecture and state-of-the-art access management:

- ✔ Leverage Salesforce Secured within the best-in-class Good Dynamics platform to provide security, connectivity and productivity
- ✔ Ensure all users go through the Identity Provider services before accessing the Salesforce cloud, and drive all traffic through the enterprise network
- ✔ Integrate Salesforce Secured with your Identity Service Provider or SSO vendor
- ✔ Restrict mobile OS and app functions that would leak corporate data
- ✔ Get support to easily toggle among multiple hosts

What's in it for users?

Unleash the power of Salesforce from anywhere: enhance presentations in customer meetings, send an instant thank you from the train, or edit documents while away from your desk.

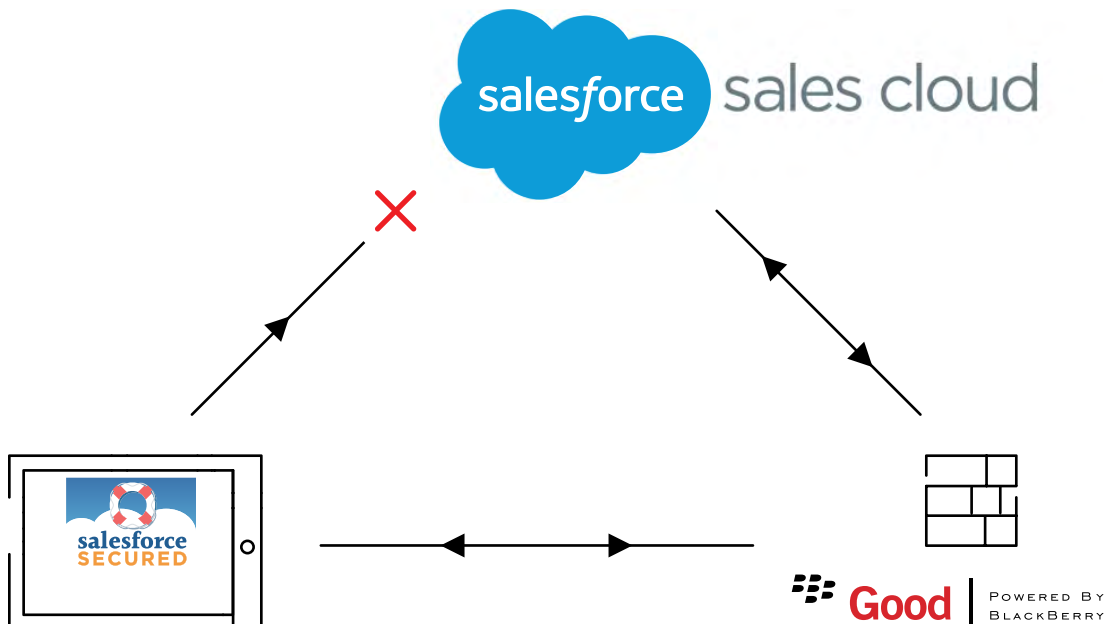

What's in it for IT?

Give users the mobile access they want, while keeping your key enterprise data secured and managed via trusted platforms.

What's in it for the business?

Increase efficiency of your representatives and wow customers with exceptional service – without worrying about cybersecurity.

Organizations using a mobile Salesforce platform save an average ROI of 520% over five years.¹

Get a seamless experience

62% of employees say they need mobile access to corporate information to be productive.²

Salesforce Secured is a native mobile app that provides secure access to the standard Salesforce features, your custom Visual Force pages and apps managed by third parties.

Salesforce Secured integrates with your Good solutions for a seamless experience, so you can automatically open email links and web addresses. It also supports app-to-app data exchanges with other secured apps.
